

# Assets

Reference resources for building Embergrove Tower Defense: brand logo, brand information, color palette, background art, layout diagram, and game flow.

## Brand Logo

Use this logo on the start screen and as the page heading. Keep clear space around it.

## Brand Information

Embergrove Games Cafe is a fantasy themed tabletop board game cafe based in Portland, Oregon. It rents board games by the hour, serves drinks and snacks, and hosts weekend game nights. The website lists the game library and opening hours and lets guests join a wait list for a table. The brand voice is warm and welcoming with an "ember lit" fantasy feel: cozy, glowing, and approachable rather than dark or aggressive. The game should match that tone and the brand colors below.

## Color Palette

#1A1208

#6B4A2B

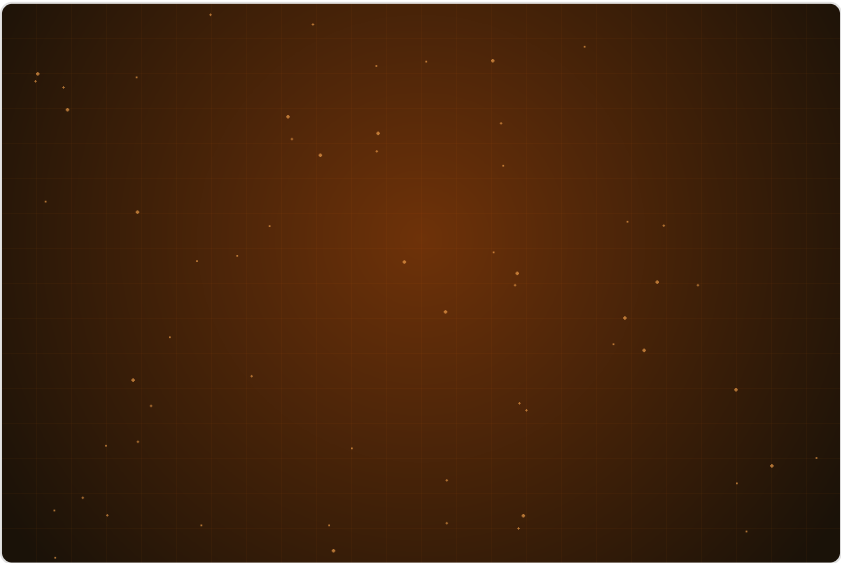

#2E4A24

#FF7A1A

| Color      | Hex    | Where to use                       |
|------------|--------|------------------------------------|
| Background | 1A1208 | Canvas background and screens      |
| Path       | 6B4A2B | The enemy path tiles               |
| Grass      | 2E4A24 | The buildable tiles                |
| Accent     | FF7A1A | HUD text, buttons, and turret fire |

## Start Screen Background

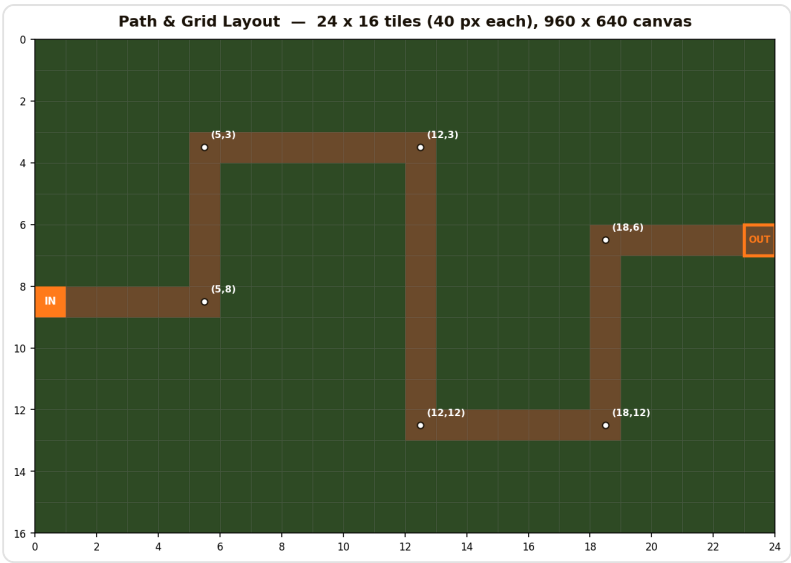

A ready made ember background for the start screen. You may also draw the background in code using the palette above.

Start screen background, 960 by 640 pixels.

## Path and Grid Layout

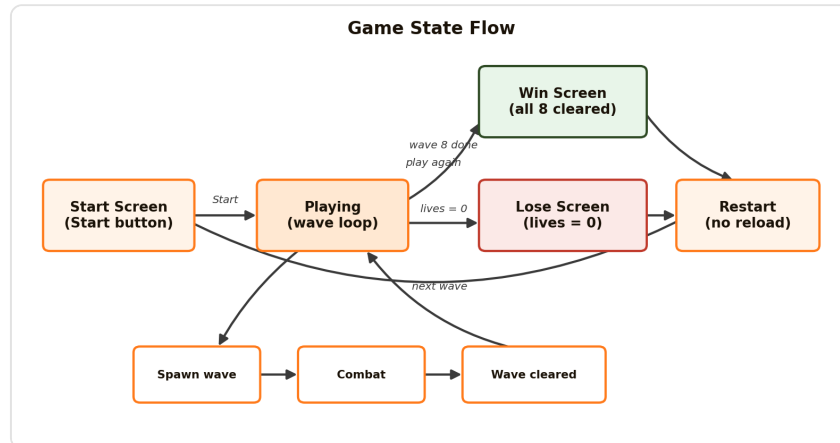

The exact path the enemies follow on the 24 by 16 tile grid. White dots mark the turn waypoints in (column, row) tile coordinates.

Entry at tile (0, 8) on the left; exit at tile (23, 6) on the right; six turns.

## Game State Flow

How the game moves between screens and through the wave loop.

Start to Playing, the wave loop repeats for eight waves, then Win or Lose, then Restart.

## How to Use These Assets

- Match every color in the game to the hex values in the palette table.
- Lay out the path using the waypoint coordinates in the layout diagram.
- Place the logo on the start screen and reuse it in the page heading.
- Use the background image, or recreate the same ember look in code.
- Follow the state flow so Start, Playing, Win, Lose, and Restart all connect correctly.

These resources are guides for the look and structure of the game. Final pixel values, fonts, and sprite shapes can be produced in code as long as the sizes, path, colors, and flow shown here are followed.
